

Do you ever wonder where Iran gets the money to buy its weapons?

Military leaders are speaking out about how America's dependence on oil – *ANY OIL* – is putting our troops and national security at risk.

“We have less than ten years to change our fossil fuel dependency course in significant ways. Our nation's security depends on the swift, serious, and thoughtful response to the inter-linked challenges of energy security and climate change.”

– Vice Admiral Dennis McGinn

“Unleash us from the tether of fuel.”

– U.S. Marine General James Mattis

“Except for our own Civil War, this is the only war that we have fought where we are paying for both sides. We pay Saudi Arabia \$160 billion for its oil, and \$3 or \$4 billion of that goes to the Wahhabis, who teach children to hate. We are paying for these terrorists with our SUVs.”

– Jim Woolsey, Former CIA Director

That's why the Pentagon and the CIA are now calling America's dependence on fossil fuels one of our nation's greatest security threats.

Congress needs to support taking control of our energy future and investing in alternative and renewable fuels that can break our nation's oil addiction.
